# **Legal Disclaimer**

The evaluation board is for testing purposes only and, because it has limited functions and limited resilience, is not suitable for permanent use under real conditions. If the evaluation board is nevertheless used under real conditions, this is done at one's responsibility; any liability of Rutronik is insofar excluded.

#### **Overview**

#### **Features**

The development kit RDK4 is based on an automotive PSoC 4100S Max microcontroller and TLE9262-3BQX System-Basis Chip. The RDK4 is a solution created by Rutronik that enables developers to evaluate and implement their ideas into their automotive or industrial projects.

Key features of RDK4:

- CY8C4149AZE-S598 Infineon's Arm® Cortex™-M0+ AEC-Q100 compliant MCU.
- All CY8C4149AZE-S598 GPIOs are accessible via onboard headers.
- TLE9262-3BQXV33 Infineon's System Basis Chip for automotive applications.
- On-board debugger KitProg3 with I2C and UART USB bridge.
- 10-pin Amphenol ICC SWD header for J-Link.
- JAE USB Type-C connector for the KitProg3 debugger.
- Minitek MicroSpace™ CAN FD connector.
- On-board capacitive buttons based on CapSense® CSX technology.
- TOPLED® E1608 and OSIRE® E3635 OSRAM LEDs.
- Diodes Inc. automotive PNP Power Transistor BCP5216TA for the SBC LDO circuit.
- Keystone Electronics Corp. P/N5019 GND test point.
- TOSHIBA Load Switch (with the current limiting capability) TCK22946G,LF.
- NISSHINBO low power amplifier NJU77001F.
- DIPTRONICS tactile buttons.
- Panasonic Right-angled RESET switch.
- C&K Slider switches for power supply selection and hardware configuration.
- PIHER Potentiometer for ADC peripheral evaluation.
- Passive components from Samsung EM, Yageo, and ASJ.

### **Block Diagram**

## **Component Placement**

### **Delivery Set**

The delivery set of RDK4 includes:

- RDK4 development board.
- On-board debugger KitProg3 with I2C and UART USB bridge.
- USB 2.0 Cable A Male to C Male to connect the board to PC.
- Two solder tip plugs P/N 6006 for the battery power supply connection through the banana sockets J1 and J4.

## **Applicable Boards**

To be updated

### **Hardware**

#### **Microcontroller**

Automotive PSoC® 4 MCU platform has an AEC-Q100 qualification established by Automotive Electronics Council (AEC).

32-bit MCU subsystem includes:

- 48-MHz Arm Cortex-M0+ CPU.
- Up to 384 KB of flash with accelerator, coupled to the CPU to improve average access times from the flash block.
- Up to 32 KB of SRAM with zero wait-state access at 48 MHz.
- 16-channel Direct Memory Access engine.

CapSense is supported on all pins in PSoC 4100S Max via a Multi-Sensing Converter that can be connected to any pin via the Analog Mux Busses that any GPIO pin can be connected to.

#### **Programming Using External Connector**

Users may use third-party programming devices to connect the CY8C4149AZE-S598 target via the P11 SWD connector. The onboard "KitProg3" debugger should not be powered while using an external JTAG connector.

#### **Power Sources**

There are four ways to provide power for the MCU in RDK4:

- 1. KitProg3 USB Type-C port 5.5V maximum.
- 2. Arduino connector P3 pin 8 [VIN] 26V maximum.
- 3. VS AUX header P2 26V maximum.
- 4. Battery banana sockets J1 and J4 26V maximum.

Power Distribution Diagram

Select the main power supply using SW4 – the KitProg3 USB Type-C port **USB** or the 3.3V System Basis Chip VCC1 **LDO** output.

#### Insertion and Extraction of Wire from AVX 9296 Connectors

The RDK4 board has two AVX 9296 2-pin connectors for the Li-ion battery and load connection (P13 and P6). The 20/22/24/26AWG wires are recommended to be striped from 3.5mm to 4.5mm before insertion. Once inserted it can be extracted without any tools. Gently rotate the wire while pulling until the extraction is complete. Please refer to the application note 201-01-167 provided by the AVX for more detailed information.

## **Spare GPIOs**

All GPIOs of CY8C4149AZE-S598 MCU are available at sockets P7, P8, and P15. Some may need to be configured using <u>solder bridges</u>.

Socket P7 Pinout			Socket P15 Pinout				
Pin No.	Name	Name	Pin No.	Pin No.	Name	Name	Pin No.
1	P4.1	P4.0	2	1	P3.7	GND	2

The locations of the solder bridges can be found in <u>3D model</u> and <u>assembly drawings</u> of RDK4.

How to find a component on the layout

#### **Fuses**

The RDK4 board has two 2A fast-acting fuses F1 and F2 in a 1206 package; part No: CC12H2A-TR "Eaton".

## **Changing the Fuses or Solder Bridges**

The SMD "Chipping Tool" is recommended to use for SMD solder bridges or fuses soldering on the RDK4 development board.

Soldering the RDK4's fuse

### **Software and Firmware**

### **Getting Started**

- 1. Register or/and login at <u>Infineon</u> website (myInfineon tab). License generation takes up to several days.
- 2. Download and install the latest version of ModusToolbox™ software.
- 3. *[Optional]* Download and install your preferred terminal emulator, for example: <u>PuTTY</u>, <u>Tera Term</u>, etc.
- 4. Connect your board (USB-C socket with a marking "KitProg3") and a PC via USB Type-C cable.

5. Check if RDK4 is ready. Its **DEBUG** yellow LED should shine constantly.

6. The "KitProg3" port must be seen in MS Windows Device Manager window.

- 7. [For Rutronik laptops only] Run File New ModusToolbox Application Settings
  - Proxy server settings and enter the proxy address: <a href="http://iwsva.rut.local:8080">http://iwsva.rut.local:8080</a>

#### **Creating New Project**

Run File – New – ModusToolbox Application. Wait for a while, open PSoC™ 4 BSPs block, select RDK4 and press Next after that.

2. Open **Getting Started** block, check **RDK4 Empty Application**, insert the **New Application Name** and click **Create**. Wait for a while until project creation is finished.

 Run Library Manager tool, select retarget-io library, then press Add Library and Update.

4. Copy, paste and save the code example to the "main.c" file.

```
#include "cy_pdl.h"
#include "cyhal.h"
#include "cybsp.h"
#include "cy_retarget_io.h"
int main(void)
    cy_rslt_t result;
    /* Initialize the device and board peripherals */
    result = cybsp_init();
    if (result != CY_RSLT_SUCCESS)
        CY_ASSERT(0);
    }
      _enable_irq();
    /*Initialize GREEN LED*/
    result = cyhal_gpio_init( USER_LED_GREEN, CYHAL_GPIO_DIR_OUTPUT, CYHAL_GPIO_DRIVE_STRONG, CYBSP_LED_STATE_OFF);
    if (result != CY_RSLT_SUCCESS)
    {CY_ASSERT(0);}
    /*Enable debug output via KitProg UART*/
    result = cy_retarget_io_init( KITPROG_TX, KITPROG_RX, CY_RETARGET_IO_BAUDRATE);
    if (result != CY_RSLT_SUCCESS)
    {CY_ASSERT(0);}
    printf("\x1b[2J\x1b[;H");
    for (;;)
    /*Delay 500 milliseconds*/
    Cy_SysLib_Delay(500);
    printf("Powered by RUTRONIK.\r\n");
    cyhal_gpio_toggle(USER_LED_GREEN);
}
```

5. Build and Debug the active project.

6. The final result is a blinking green LED on the RDK4 board and text on the terminal window.

#### ModusToolbox Terminal

## **Running Existing Project**

Run File – New – ModusToolbox Application. Wait for a while, open PSoC™ 4 BSPs block, select RDK4 and press Next after that.

2. Type *RDK4* in the search field. Select the example in the list and click **Create**.

3. After project creation is finished, update the libraries with Library Manager tool.

4. Select the project. Build and debug it.

Check README.md file before starting to explore the code example. You may find important hints and other information that are needed to have firmware running properly.

## **Firmware Examples**

All these examples can be found at GitHub.

RDK4_CapSense_Buttons	This example demonstrates how to use CapSense			
NDN4_Capselise_buttoris	CSX Buttons on RDK4.			
	This example demonstrates how to use the HAL			
RDK4_Arduino_ADC_HAL	library to measure all the ADC channels on the			
	Arduino ADC header.			
RDK4_I2C_Scanner	This application is used to find all the devices			
NDN4_120_Scallife	connected to the I2C.			
	This example is an introduction to the basic			
RDK4_Hello_World	components of the board: LEDs, User Button 1			
	and KitProg3 UART for debugging.			
	This project is needed as a board support package			
TARGET_RDK4	while creating a new project with the RDK4			
	development kit.			
	This code example demonstrates a LIN 2.2			
RDK4_SBC_LIN_Example	ISO17987 connectivity using TLE9262-3BQX			
	System Basis Chip.
